

## Personal safety equipment

Personal safety equipment should be used when other precautions cannot be taken or are inadequate. The prime goal should always be the creation of a work environment in which safety equipment is not necessary.

## Features

**Avesta pickling overall 905:**

- Is made of a soft, acidproof material that is comfortable and easy to wear for long periods.
- Has an elasticated hood with additional drawstring fastening.
- Is completely leakproof (all seams are welded – not sewn).

## Safety

**Avesta first-aid spray 910** should always be readily available when pickling is being carried out. The contents of this 200 ml spray have been optimised to take care of small splashes of pickling pastes and gels.

## Safety precautions

See AvestaPolarit Welding's data sheets on material safety.
