

TORCH DESCRIPTION

This Plasma cutting torch head is manufactured from high impact thermoset plastic. It offers excellent mechanical strength combined with thermal and electrical resistance properties of the highest order. It incorporates a safety interlock system which isolates the live torch parts when the outer nozzle is removed thus preventing potentially lethal electric shock. Maximum cutting at 100% duty cycle is 150A. The torch is ideally suited for operation in the 90A to 150A range although it will operate down to 40A. There are other torches in the WTC range which are ideally suited for the lower power outputs. Special end fittings are available by application to WTC factory.
